# Agenda Sprint 4 Planning (Week 8)

Location:        Drebbelweg Hall TBD
Date:            04/04/2023
Time:            14:45 - 15:10
Attendees:       Iarina (TA), Sagar (Chair), Alexandru, Oleh (Minute taker), Teun,
                 Tudor

## Agenda-items (Shorter meeting smaller Items)

14:45 - 14:50            **Announcements from TA + Opening**
                         Looked at feedback, and what we'll do during this meeting:
Looking at feedback and asking the TA all the appropriate questions about the feedback
Grading: more centralized: one TA won't do grading for 1 team, but one TA will grade 1 rubric
that they are good at for multiple groups.
Different TAs will have our code, backlog and the rubric, and run the code and try everything
about the app that has something to do with the app.
Now focus a lot on testing and fixing bugs:
Making features can increase grade, but polishing existing things will also increase just as
much.
The TA will only spend about 10 minutes on the app, so won't be bug hunting, so make sure to
mostly focus on mostly visible bugs.
Implementing new features is still very good, since we'll not get any insufficient.

14:50 – 14:53            **Check-in**
                         Talked a bit about some questions we had about the feedback

                         Don't be too serious in the product showcase, try to make it catchy
                         and it's ok to be a bit humorous and carefully make a joke here
                         and there.

                         About the oral exam, we can be asked some terminology, but also
                         asked about how some part of the code works.

                         In the video also make sure that the person viewing it can actually
                         follow how did we get from 1 screen to another.

                         Have a small camera box in the corner, when in the video, so that
                         it is not necessary to constantly switch between the window and
                         the camera

14:53 – 14:58            **Code showcase from last week's sprint + Feedback**

Code showcase in progress

There were some unexpected technical problems, so the code showcase was scrapped

14:58 - 15:03 **Review tasks from this week's sprint**

We all made sure that everyone agrees with the task assignation that happened prior to the meeting, and that everyone knows what they are doing.

15:03 -15:08 **Question Round for TA and Final Rubric**
- Asked the TA if it is possible for her to renew her feedback on the task and planning rubric.
- She said that if we remind her the next day, she'll try to find some time to do so.
- Some questions were asked about the self-reflection. Mainly questions to make sure that the people that didn't pass, understand that what they think they need to change, is actually the thing that they need to change.

15:08 - 15:10 **Closing**
The chair closed the meeting
